

SoftekSim Flight Simulators Solutions for General Aviation and Military pilots training

SoftekSim is one of European Flight Simulator manufacturers, whose products range include flight simulators from FNPT II certification level to type specific Flight Training Devices.

The general concept is to design and manufacture as close to real aircraft simulator as possible. Actual aircraft cabins with various original components used to reach the sense of actual cabin ambience. We do a customer-tailored Simulators - while the simulation technology is well developed and proven, the Flight Simulator general arrangement can vary according to the customer's requirements.

LOFT training, MPL, Jet Orientation Course, NVG training, mission training, ATC communications, besides SEP, MEP, MCC and type training (Initial and transition type rating) are some of the various options and courses that can be integrated and trained with the Simulator.

SoftekSim is able to harness up-to-date technology, methods and systems to design and manufacture complex modifications, including convertible Simulators (SEP/MEP/ME turboprop) of required aircraft and modifications to provide most suitable solutions to Customers and required training scope.

SoftekSim is proud of its team of dedicated engineers with strong aviation background who are highly experienced in delivering solutions, that have resulted in successful Simulator models that works all around the World.
